

COVID-19 PREVENTION

Our staff helps residents recover from surgery, injury, or decline in function, while ensuring safety and reducing the impact of quarantine.

*When completely immobilized,
muscle strength can
decrease by 50%
in just 3 weeks!*

Physical Therapy

Improve strength, mobility and balance, work with nursing and MD to reduce pain and promote healing

Occupational Therapy

Improve strength, coordination and ability to safely perform self-care to avoid reinjury and preserve dignity

Speech Language Pathology

Improve communication and cognitive skills, safety awareness and treatment of swallowing problems to promote improved nutrition

PREVENTION

- Social distancing practiced
- Daily patient and staff screening
- Equipment disinfected before and after each use
- Masks, hand sanitizer, and gloves provided for patients
- Therapy staff trained in proper use of Personal Protective Equipment (PPE) and infection control

SKILLED CARE

- Highly trained professionals to treat each patient's needs
- Innovative programming to engage the patient, restore mobility, and promote independence

“Early rehabilitation of the COVID-19 patients can **ENHANCE** pulmonary, respiratory function, **REDUCE** complications, **IMPROVE** function, cognitive impairments and **QUALITY OF LIFE**” ¹

¹ Journal of Rehabilitation Medicine, J Rehabil Med 50, 2018
